

# Early Learning in California

By Jessica Troe July 2016

California families need access to affordable child care and preschool to support working parents and to ensure that children start kindergarten ready to learn. During the first five years of life, children learn critical skills such as language and socio-emotional regulation, which provide a foundation for lifelong learning.<sup>1</sup> High-quality preschool and child care can support healthy development and enable parents to work. Unfortunately, too many children are left behind by the status quo. In fact, differences in children's cognitive abilities by income are evident at only 9 months old and significantly widen by the time children are age 2.<sup>2</sup> Early learning has positive impacts for children, families, and the economy.<sup>3</sup> It's time to work to put these programs within reach.

## California families need access to high-quality child care and preschool

California has 3,002,611 children under age 6,<sup>4</sup> 61 percent of whom have all available parents in the workforce.<sup>5</sup>

High-quality child care and preschool programs help narrow school readiness gaps, which is particularly important for children of color and those living in low-income families.<sup>6</sup>

## The cost of child care is out of reach for families

Annual costs at a child care center in California average \$20,047 for an infant and a 4-year-old,<sup>9</sup> which is 31 percent of the median income for families with children.<sup>10</sup>

For low-income families and people of color, the average cost of child care would constitute the majority of income in most cases.<sup>11</sup>

## The current child care system is failing California families

On average, the Child Care and Development Block Grant, or CCDBG, serves only 7 percent of federally eligible children in California.<sup>12</sup> This results in only 111,400 California children served through CCDBG funds.<sup>13</sup> Of those served, 56 percent attend licensed or regulated center-based care.<sup>14</sup>

### Children living in low-income families<sup>7</sup>

■ Share of children younger than age 6 living in low-income households

### Race and ethnicity of children younger than age 5<sup>8\*</sup>

25% ■ White  
5% ■ African American  
53% ■ Latino  
11% ■ Asian  
<0.5% ■ American Indian and Alaska Native  
<0.5% ■ Native Hawaiian and Other Pacific Islander  
5% ■ Two or more races

75 percent of California's children under age 5 are children of color.

## California families need greater access to high-quality preschool programs

The California State Preschool Program is a streamlined program of all California early childhood education programs for 3- and 4-year-olds. Eligible families must have an income at or below 70 percent of the state median income. The program is facilitated through school districts, Head Start programs, and private and faith-based agencies that apply through a competitive application process.<sup>15</sup> This preschool program meets 4 quality benchmarks set by the National Institute for Early Education Research and spends \$5,441 annually per student.

In California, 17 percent of 3-year-olds and 27 percent of 4-year-olds are enrolled in a public preschool program.<sup>16</sup>

## Investing in high-quality early learning programs affects economies

Making child care more affordable for families can increase mothers' workforce participation, resulting in a boost to the state's economy.<sup>17</sup>

In California, if child care costs did not exceed more than 10 percent of a family's income, the state's economy would increase nearly \$334.98 million.<sup>18</sup>

## We can do better for California families

The Center for American Progress proposes two solutions to put high-quality child care and preschool within reach for California families and create an early childhood learning continuum for children:

- A new High-Quality Child Care Tax Credit would help families afford high-quality care for their children. This tax credit would benefit an estimated 741,200 children in California<sup>19</sup> and save families an average of \$8,428 per year on child care costs.<sup>20</sup>
- Voluntary universal preschool for all 3- and 4-year-olds.<sup>21</sup> This would increase access for 816,300 children in California.<sup>22</sup>

*Jessica Troe is the Policy and Outreach Coordinator for the Early Childhood Policy team at the Center for American Progress.*

**\*Correction, July 19, 2017:** This fact sheet has been updated to clarify that the second pie chart refers to state-specific data.

## Cost of child care as a share of income for people of color<sup>10</sup>

American Indian	45%
Asian and Pacific Islander	21%
African American	55%
Latino	49%

## Cost of child care as a share of income for low-income families<sup>11</sup>

100 percent of the federal poverty level	83%
150 percent of the federal poverty level	55%
200 percent of the federal poverty level	41%
