

Head Start in Rural Michigan

By Leila Schochet and Rasheed Malik April 12, 2018

Head Start helps fill a critical void in early childhood education and service delivery in Michigan's rural communities. This fact sheet examines the scope of services that the Head Start program provides to Michigan children and families, and highlights the key role that Head Start plays in the state's supply of quality child care.

Child poverty in Michigan's rural counties

Rural children in Michigan are facing significant and persistent poverty. Twenty-eight percent of rural Michigan children under the age of 5 live in poverty, compared with 26 percent of children living in metropolitan areas. In Michigan, there are three rural persistent child poverty counties, where the child poverty rate has been greater than 20 percent since 1980.¹

Family supports in rural counties

At the same time, access to many of the services that help combat child poverty—such as quality child care and health care—is very limited, particularly for low-income rural families in Michigan. Fifty percent of rural families live in a child care desert, where the supply of licensed child care does not meet demand.² Ninety percent of rural counties in Michigan are designated as a Health Service Professional Shortage Area, where there is a shortage of primary care, dental, or mental health providers.

Head Start in Michigan

- Across rural Michigan, Head Start operates 404 classrooms in 255 centers.
- Head Start funds enrollment for 34,574 children, 23 percent of whom attend rural programs.
- Head Start employs 8,696 staff, 23 percent of whom work in rural programs.

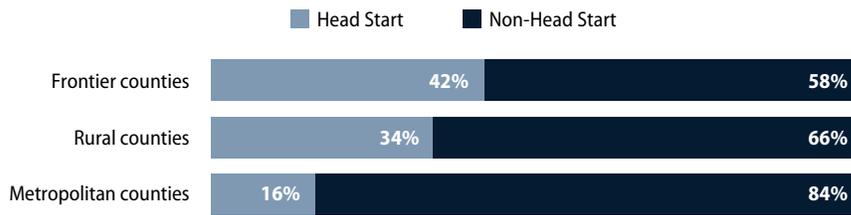

Head Start as a proportion of Michigan's child care centers

Head Start plays an outsized role in filling Michigan's rural child care shortage. In Michigan, Head Start makes up more than one-third of the center-based child care programs in rural counties and more than 40 percent of the center-based programs in frontier counties.³ In contrast, Head Start represents just 16 percent of center-based programs in metropolitan areas.

Head Start health and education service delivery

Head Start delivers health and education services to rural children who may not otherwise have access and makes significant progress in connecting children to these services over the school year.

Head Start provides critical family services to Michigan families

Among families enrolled in Head Start, 66 percent of rural families and 66 percent of metropolitan families in Michigan received some type of family service through Head Start. This includes services such as parenting education, health education, job training, and substance abuse prevention.
